THE HARTZELL DIFFERENCE

Building the highest quality fans in America for generations

QUALITY AT EVERY TURN.

Hartzell Air Movement exceeds the standard in the air movement industry, committed to delivering top-quality, reliable products. And our relationship with our customers, and our knowledgeable, inventive, flexible and hardworking employees are the reasons we've continued and thrived, right here in the USA, for six generations.

Customers choose Hartzell for our:

- Durability and high performance
- Low cost of ownership
- Leadership in performance testing and certification
- Advanced engineering and manufacturing processes
- Innovative design and manufacturing
- Trusted brand name

Experienced Hartzell team to assist you from design to shipping

ISO 9001:2015 Certification

AMCA Accredited Laboratory

Complete Fans and Blowers

Centrifugal Wheels

Airfoil Propellers

HARTZELL ADVANTAGES

A LIFETIME OF VALUE

- ☐ Industrial fans are field proven, 100% tested, with virtually no incident of return
- ☐ Energy efficient designs that provide a lower total cost of ownership

LEADERSHIP IN PERFORMANCE

- ☐ Products certified by AMCA that meet DOE recommended efficiencies
- ☐ Highly efficient industrial fan designs that are the quietest in the market
- ☐ Airfoil shape blades with industry leading measured efficiencies

ADVANCED ENGINEERING & MANUFACTURING

- ☐ Proven manufacturing techniques on state of the art equipment in ISO 9001:2015 registered facilities
- ☐ Engineering team utilizes the latest design tools in 3D CAD and other modeling software

CREATIVE DESIGN & MANUFACTURING TEAM

- ☐ Offering the greatest number of industrial fan design choices
- ☐ Building products to meet your rigorous application; no limiting catalog

TRUSTED BRAND NAME

- ☐ Extensive talent pool bringing over 145 years of knowledge and experience to you

5-YEAR WARRANTY

- ☐ The industry's first and only manufacturer that stands behind their products for a full 5-years

- ☒ Register your 5 year warranty
- ☒ Download your installation manual
- ☒ Order replacement parts

For more information, contact your local Hartzell Sales Representative. info@hartzell.com

HARTZELL WARRANTY

LIMITED WARRANTIES, LIMITATION OF LIABILITY, AND LIMITATION OF LIABILITY FOR BREACH OF WARRANTY

NO IMPLIED WARRANTIES OF MERCHANTABILITY OR FITNESS

Hartzell does not warrant that said goods are of merchantable quality or that they are fit for any particular purpose. There is no implied warranty of merchantability and there is no implied warranty of fitness.

The details of the Hartzell warranty can be found at
<http://www.hartzellairmovement.com/warranty-service>

PERFORMANCE GUARANTEED

Your products are only as good as the components that go into them. We know you have high expectations, and so does Hartzell Air Movement. We know you expect the most reliable and durable industrial air movement products available, so we're holding ourselves to a higher standard. We're so sure that our products will out-perform industry standards, we're backing that promise with the industry's first – and only
– five-year warranty.

At Hartzell, these are words we live by. They guide us every day. Good enough isn't how you design your products. It's not how we engineer, build and support our products — or provide ongoing service to our customers. When we looked at the industry standard two-year warranty, we knew we had to do better. And we did — by offering the Hartzell
FIVE-YEAR WARRANTY.

Register for your 5year warranty at
<https://www.hartzellairmovement.com/warranty-and-parts/five-year-warranty>

ADVANTAGES OF FIBERGLASS CONSTRUCTION

A variety of corrosion problems plague the water and wastewater industry. Although fans and blowers made of coated steel or metals such as stainless, Hastelloy and monel can handle some of these challenges, Hartzell's fiberglass products provide unsurpassed resistance to a great majority of corrosive elements at a cost substantially below that of corrosion resistant metals.

ADVANTAGES

✓ FIBERGLASS OFFERS SUPERIOR CORROSION RESISTANT PROPERTIES

- ✓ Weighs 25% - 50% less than comparable equipment made of metal alloys
- ✓ Has an extremely high strength-to-weight ratio, stronger than steel on a per-pound basis
- ✓ Has excellent dimensional stability
- ✓ Will not become brittle at low temperatures and at -40°F laminated fiberglass will be stronger than at room temperature
- ✓ Offers a distinct price advantage over stainless and Monel (as much as 1/3 in original cost)
- ✓ Has a longer service life and requires less maintenance
- ✓ Offers weather-resistant characteristics – it will not tarnish and will never need painting
- ✓ Is extremely durable and highly resistant to impact

When optional surface veil, electrical grounding and dynamic balancing are applied, Hartzell Air Movement conforms to ASTM D4167-21 and ASTM E84-2008 Standard Specifications for Fiber-Reinforced Plastic (FRP) Fans and Blowers.

SUPERIOR CORROSION RESISTANCE

RESIN TRANSFER MOLDED

Hartzell offers the **ONLY** fiberglass wheels & propellers available in a solid, one-piece design from the mold.

- ✓ Solid, one-piece design from an RTM mold – up to 60" dia.
- ✓ Consistent wheels and propellers with 98%+ exact wheels and propellers. Only variation is in the requested finishes.
- ✓ Repeatable Process
- ✓ Available in 12" - 60" diameters
- ✓ Much stronger wheels and propellers

Hartzell's fiberglass wheels and propellers are unique in the fan and blower industry.

They are manufactured as a single fiberglass piece using a multi-section RTM mold, ensuring that each wheel and prop is aerodynamically identical and provides reliable, repeatable performance without the variability of hand-made and taped components.

The superior design is a result of a substantial investment in research, development, tooling, and manufacturing methods by Hartzell Air Movement.

Basics of Fan Selection

The first consideration in any fan selection is the amount of air to be moved and the resistance to this air movement. With specific performance and application criteria in mind, propeller and centrifugal fan selections typically require decisions based on the following criteria.

Belt Drive vs. Direct Drive

Belt drive fans offer the ability to adjust fan speed for system balancing if necessary. They also offer more flexibility in speeds and motor selections. In a cost comparison, belt drive fans are typically less costly than comparable size direct drive fans with low speed motors.

Direct drive fans are often preferred for jobs where maintenance access is difficult. Maintenance costs are generally lower with direct drive fans since there are no belts or bearings to replace and no pulleys to adjust.

Larger Fans vs. Smaller Fans

In most applications, several fans may meet the specified airflow and pressure requirements. Just as larger fans tend to turn slower and generate less sound, they also tend to have higher initial costs but lower operating costs. Smaller fans have more stable performance curves, lower initial costs, higher sound levels and higher operating costs because of their higher speeds.

Low Sound vs. High Static Pressure

Fans selected for high static pressures run at higher speeds and produce higher tip speeds resulting in higher sound levels. Conversely, in low pressure applications fans generally run at lower speeds, produce lower noise levels and are recommended for sound sensitive applications.

How Accessories Affect Static Pressure

All accessory losses must be accounted for when calculating the static pressure load for a fan. For example, when fans are used in conjunction with properly applied accessories, lower pressure capabilities can be specified.

When fans are over-specified to compensate for losses that do not actually exist, both cost and sound levels can be higher than necessary. This most commonly results from larger motors and higher tip speeds.

Motor Service Factor

Some motors are cooled by the airstream. With an uninterrupted flow of cooling air, motors may be operated in their service factor range (up to 15% above the motor nameplate horsepower without damage due to overheating. Less overloads are recommended for applications using totally enclosed or explosion resistant motors.

Wastewater plant installation with 30 fiberglass fans

Hartzell's fiberglass centrifugal fans can be found in many applications that expose components to caustic fumes, acidic fumes, and / or salt laden air. In the above Wastewater Treatment example fiberglass fans are used for: Fan Room Exhaust, Grit/Pump Room Exhaust, Solids Exhaust, Storage Supply/Exhaust, Channel Exhaust, Filter Gallery Exhaust, Influent Pump Station Supply, and Polymer Room Supply / Exhaust and have all been in service for over 20 years.

Standard Construction

FRP Construction: All structural parts in the airstream are fiberglass and resin. All fiberglass surfaces are protected with a minimum 10-mil thickness of chemical, flame, and ultraviolet resistant resin.

FRP Components & Housing: Constructed of fiberglass and premium corrosive resistant vinylester resin with a Class I flame spread rate of 25 or less.

Wheel: Constructed of fiberglass and Derakane 510-A corrosion resistant vinylester resin with a Class I flame spread rate of 25 or less.

See the Corrosion Resistance Guide on page 29 for resin characteristics.

General Features

Applications: Developed for compatible corrosive applications where it is advantageous to have fiberglass materials and have the motor out of the airstream.

Shafts: Shaft material is carbon steel as standard, turned, ground, polished, and keyed at both ends with fiberglass sleeve in the airstream. Shafts are sized to operate well below critical speed.

304 stainless steel, 316 stainless steel, or monel shafting is available as an option at extra cost.

Bearings: Bearings are heavy duty, deep row radial ball or double row spherical roller type self-aligning and shielded in cast iron housings. Long inner races insure even load distribution, providing a high radial and thrust load capacity. Bearings have a minimum life of 250,000 hours for Series 41, 42, 43, and Series 40 mounted horizontally. For Series 40 in a vertical mounting L-50 of 500,000 hours. Bearings are relubricable for continuous service and include extended lubrication fittings as standard.

Shaft Seal: A fiberglass and neoprene shaft seal is placed where the shaft leaves the housing along with a neoprene shaft slinger between the seal and wheel on belt drive units. The seal is not – Type 316 SS or Monel airstream

Motor: The Series 40 Hartzell offers special motors for those very harsh environments. Type 304 stainless steel or 316 stainless steel size limits are identified in the Principal Dimensions table. single and double lip shaft seals are available both with teflon or viton bands. Purge valve /

V-Belt Drives: Oversized for long life and continuous duty. Variable pitch drives are a standard option for 10 HP and below and fixed pitch are a standard option above 10 HP. Belts are oil, heat, and static resistant type.

Easy Installation and Maintenance – Motor, drives and bearings are readily accessible for ease in wiring, installation, adjustment, and lubrication. Weather cover and guards are available.

Balancing: The fan is dynamically balanced to the requirements of Fan Application Category BV-3 of AMCA/ANSI Std. 204. All fans receive vibration test and inspection prior to shipment.

Spark Resistant Construction: Available as an option.

Protective Coatings: Available as an option for abrasive or extremely corrosive environments.

For Series 42 & Series 43 Belt Drive Units:

V-Belt Drive: Oversized for continuous duty. Belts are oil, heat and static resistant type.

Bearings: Heavy-duty, self-aligning, pillow block bearings are standard.

Shaft Seal: A fiberglass and neoprene shaft seal is placed where the shaft leaves the housing along with a neoprene shaft slinger between the seal and wheel. The seal is not gas tight

For Series 41P & Series 41U Units:

Motor Out of Airstream: The motor is interior mounted on an adjustable motor pivot base as standard. Motors can be furnished as TEFC, Mill and Chemical Duty or to other specifications on request.

Hardware: Internal hardware (airstream) is encapsulated type

304 stainless steel. All external hardware (out of airstream) is zinc plated as standard. Where metal is subject to attack by the corrosive elements being handled, all metal parts can be resin-coated after assembly. Also available: – Type 304 SS, 316 SS, or Monel complete fan

Hartzell FRP Centrifugal Fans – Series Comparison Chart

Series	Drive Type		Mounting Types				Location		Motor Location		Performance	
	Belt	Direct	Floor	Roof Curb	Wall	Indoor	Outdoor	Out of Airstream	In Airstream		Maximum Volume (CFM)	Maximum S.P. (in. W.G.)
40	X		X	X	X	X	X	X			100,000	30
41	X		X	X	X	X	X	X	Shaft only on direct drive units		32,000	12
41P	X		X	X	X	X	X	X			10,300	6
42	X		X	X	X	X	X	X			2,000	12
43	X		X	X	X	X	X	X	Shaft only on direct drive units		18,000	18
43P	X		X	X	X	X	X	X	Shaft only on direct drive units			

In-Line Centrifugal Fan Arrangements

View Facing Outlet

Arrangement 1

For belt drive. Impeller overhung on a shaft supported by bearing mounted with casing. Motor mounted independent of casing. Horizontal discharge.

View Facing Outlet

Arrangement 9

For belt drive. Impeller overhung on a shaft supported by bearings mounted with casing. Fan may be rotated to achieve motor positions. For horizontal and vertical discharge. Duct mounting shown.

Arrangement 9 can be furnished with supports for floor, wall or ceiling mounting. The position of these supports determines which motor locations are available for motor placement.

Generally motor locations 135, 180 and 225 are not available on floor, wall or inverted ceiling mounted fans and motor locations 45, 90, 270 & 315 may not be available for ceiling hung fans.

Arrangement 9 – PRV

When desirable, the in-line centrifugal fan can be mounted as a power roof ventilator for exhaust application. Together with a stack cap and panel, the three elements combine to provide an efficient roof exhaust. Back draft dampers in the stack cap offer weatherproof closure for vertical air discharge.

Vertical Mounting

Another method for mounting vertical fans is shown in the view above. Specify fan to be furnished with ceiling mounting brackets, floor mounting brackets or both.

Specify either upblast or downblast discharge for vertically mounted fans.

Centrifugal Fan Arrangements

 Arrangement 1 Unit furnished with shaft and bearings, less motor and drive. Designed to be driven by a separately mounted motor. Impeller is overhung – two bearings on base. Series 41 & 43 only.	 Motor Position Designation Motor position designation is necessary when ordering the following for Arrangement 1 fans: 1 – V Belt Drive 2 – Vibration Bases 3 – Belt Guards Note: Location of motor is determined by facing the drive side of the fan and designating the motor position by letters W, X, Y, or Z. Consider discharge location and height when specifying.
 Arrangement 4 Direct drive packaged unit, wheel is overhung and attached to the shaft of the electric motor. No bearings on fan. Temperature limitations: 200°F. Series 41 & 42 only.	 Arrangement 8 Direct coupled configuration with motor mounted to common fan base. Impeller is overhung and supported by two bearings on fan base. Series 41 and 43 only.
 Arrangement 9 Belt drive configuration with motor mounted on outside of bearing base support. Packaged unit, wheel is overhung, slide rail motor base permits easy adjustment of belt tension. Available on either left or right hand side of base (when facing drive end of shaft). Series 41 & 43 only.	 Arrangement 10 Belt drive configuration with motor mounted inside base. Packaged unit, wheel is overhung. Series 41, 42, 43, 41P, & 41U.

Adapted from AMCA Standard 99-2404-03, Drive Arrangements for Centrifugal Fans, and AMCA Standard 99-2407-03, Motor Positions for Belt or Chain Drive Centrifugal Fans, with written permission from Air Movement and Control Association International, Inc.

In-Line Centrifugal Fan Classifications

Hartzell Series 40 Fiberglass Backward Curved Centrifugal Fans, Type FA, are designed and classified with two classes of construction. Class I construction covers light to medium duty performance. Class II construction is required for maximum fan performance, but is inappropriate under light duty applications due to inadequate loading of the bearings.

Series 40 Fans are available in Class I and II construction in 100% width and 66% width. These parameters are explained in the following table.

FAN CLASS	PERFORMANCE RANGE
I	Light to Medium Duty
II	Maximum Fan Performance

Centrifugal Fan Classifications

Series 41 and 41P Fiberglass Backward Curved Centrifugal Fans, Class I and III construction. Hartzell Series 41 in 66% width are available in Class I, Type FA, are designed and classified to perform within the centrifugal fan classification parameters established by AMCA Standard No. 240 Class II, III, and IV construction. Hartzell Series 41 in 33% width are available in Class II construction only. See performance tables for specific ratings. Hartzell Series 41 Fiberglass Backward Curved Centrifugal Fans, Type FA, 100% width are available in Class I and II These parameters are explained in the following table.

FAN CLASS	PERFORMANCE RANGE*		
	100% WIDTH	66% WIDTH	33% WIDTH
I	5" @ 2300 FPM to 21 1/2" @ 3200 FPM	6" @ 1300 FPM to 2" @ 2700 FPM	
II	8 1/2" @ 3000 FPM to 47 1/4" @ 4175 FPM	10" @ 2300 FPM to 2" @ 4000 FPM	14" @ 1400 FPM to 12" @ 1800 FPM
III		16" @ 2500 FPM to 4" @ 4000 FPM	22" @ 1500 FPM to 12" @ 3500 FPM
IV			30" @ 1700 FPM to 30" @ 3200 FPM

* At standard air conditions (70°F, 29.92 in. HG barometric pressure, .075 lbs./ft.3). Static pressure shown in inches of water; outlet velocity shown in feet per minute. Performance Ranges apply only to 100% width construction.

Performance Guaranteed

Your products are only as good as the components that go into them. We know you have high expectations, and so does Hartzell Air Movement. We know you expect the most reliable and durable industrial air movement products available, so we’re holding ourselves to a higher standard. We’re so sure that our products will out-perform industry standards, we’re backing that promise with the industry’s first – and only – five-year warranty.

At Hartzell, these are words we live by. They guide us every day. Good enough isn’t how you design your products. It’s not how we engineer, build and support our products — or provide ongoing service to our customers. When we looked at the industry standard two-year warranty, we knew we had to do better. And we did — by offering the Hartzell **FIVE-YEAR WARRANTY**.

Options and Accessories

Abrasive/Erosive Resistant Coating

HartKoate is an abrasive/erosive resistant coating developed by Hartzell Air Movement for application in environments where abrasive/erosive conditions may exist. HartKoate helps prevent premature deterioration of equipment in environments where uncoated fans may fail.

HartKoate is applied to a 50-60 mil thickness suitable for temperatures to 200°F.

HartKoate is particularly appropriate for use when water mist and/or abrasive particles exist in the airstream.

Contact your Hartzell representative for further details concerning the application of HartKoate coating to fiberglass fans in corrosive atmospheres.

Hi-Cor Construction

All airstream surfaces exposed to corrosive environment will be protected with a layer of Synthetic (Nexus) surfacing veil. An additional final coat of resin will be applied for extra corrosion resistance.

When Hi-Cor construction is required, the factory should be consulted concerning the corrosive environment involved.

Electrostatically Grounded

For applications in which fiberglass products are handling gas fumes that are not only corrosive but also potentially explosive, the equipment should be specially constructed to control and remove static electricity. Interior airstream surfaces can be coated with a "carbon rich" resin coat.

Grounding straps are secured from the side of the housing to the fan's steel base. All that remains to effectively ground the airstream is to ground the fan base at the time of installation.

ASTM D4167-21 Construction

(ASTM D4167-97, Standard Specification for Fiber-Reinforced Plastic Fans and Blowers.)

For corrosive systems where ASTM construction is specified this construction option adds:

- Synthetic veil
- Electrostatically conductive surface coating applied to airstream housing and impeller surfaces
- Special nameplates
- Special final dynamic balancing to fan

Fan Sound Reduction

When fan sound is an issue, Hartzell has the solutions.

- Special insulated housings
- Inlet and outlet silencers
- Sound Blankets
- Sound Enclosures

Please contact factory for what options are best for your application.

Inlet Control Damper

Dampers are mounted on the blower's drilled inlet flange to increase the efficiency of the system and permit control of air volume. Dampers are fiberglass, epoxy coated or stainless steel construction.

Outlet Control Damper

Dampers are mounted directly on the blower outlet to control the volume of air delivered to the system. Opposed and parallel blade dampers are available in steel, stainless steel, coated steel and solid fiberglass.

Parallel Blade Type

Best suited for applications requiring accurate air volume in a range from wide open to 75% open. Usually used for balancing the system or for modulated control when pressure drop is variable.

Parallel Blade

Opposed Blade Type

Best suited for control over a broad range of air volume with more precise control.

Opposed Blade

Both types of outlet control dampers are available in three classifications:

Class I –Maximum static pressure: 5" S.P.

Maximum velocity: 3,900 FPM

Class II –Maximum static pressure: 8 1/2" S.P.

Maximum velocity: 5,100 FPM

Class III –Maximum static pressure: 20" S.P.

Maximum velocity: 6,000 FPM

Discharge Backdraft Damper

Automatic gravity operated backdraft damper eliminates backflow of air when fan is not operating. Can handle up to 4,000 FPM and 16" of S.P.

Round Volume Control Damper

Designed for up to 30" S.P. and available with near zero leakage.

Scan the QR code to visit our website!

Options and Accessories (cont.)

Drain

PVC female threaded 1" NPT for Series 40, 41, 41P, 41U, and 43 (sizes 30 & 36)

1/2" NPT for Series 42 and Series 43. Sizes 16" – 26"

Access Door

Raised, bolted door held in place with zinc plated bolts and gasketed for a tight seal.

Not Available on Series 40 and 42.

Inspection Door

Allows for periodic visual inspection of the wheel. Constructed of fiberglass, fastened with stainless steel bolts and gasketed for tight seal. **Not available on Series 43 only.**

Flanged Inlet

A fiberglass inlet flange is available (Standard on Series 40). Flanges are drilled upon request. Note: A flanged and drilled inlet is required when an inlet control damper is used.

Flanged Outlet

Flanged outlets are standard on the Series 40, 41 and 41P, 42, and 43. A bolt-on flanged outlet is available for the Series 41U. Drilled flanges are available on all series.

Vibration Isolators

Rubber-in-shear or spring type isolators are available.

Arrangement 1 Sub-Base

Common structural support for an Arrangement 1 fan and motor. Please specify motor mounting position. Epoxy coated steel construction. **Series 41 and 43 only.**

Arrangement E Motor Base

Accommodates a larger frame size motor than the standard arrangement 9 base. **Series 41 and 43 only.**

Additional Arrangements

Arrangement 8 and other arrangements (not shown in this catalog) are available. Please contact the factory.

Inlet and Outlet Guards

A spiral ring guard can be furnished for the inlet side and a wire mesh guard can be furnished for the outlet. Series 40 outlet guard same as inlet.

Combination Drive Guard & Weather Cover

Constructed of epoxy coated steel. Covers motor and shaft sheaves as well as belts. Guards the drive and provides weather protection. Please specify fan arrangement.

Arrangement 9

Arrangement 10

Drive Guards

Encloses the drive assembly while permitting circulation of ambient air. Standard features include: tach opening, belt tension openings and adjustable length. **Series 41, 42, 43 only.**

Shaft Guard
Arrangements 1, 8, & 9

Belt Drive Guard
Arrangements 1 & 9

Inlet Box

Constructed of solid fiberglass, an inlet box improves entry conditions and minimizes losses, which are generally associated with duct elbows at the fan inlet. Inlet boxes are designed for specific applications. Please contact factory. **Available for Series 41, 41P, 41U and 43.**

Disconnect Switch

An on/off switch mounted to the unit to provide safety during maintenance.

Shaft Seals

Standard friction shaft seals are available in Neoprene, Teflon, and Viton. Available on all fiberglass centrifugal fans. Single Lip and Double Lip shaft seals are available in types 304 SS and 316 SS with either Teflon or Viton inserts. Double Lip has optional Purge / Greaser. **Available for Series 41, 41P, 42, and 43.**

Standard Type

Double Lip Type

Options and Accessories I Series 40 ONLY

Companion Flanges

Drilled to fit the flanges of the fan; allows for easy installation. Fiberglass construction.

Fiberglass Weather Cover

Designed to fit fiberglass in-line centrifugal fans. The cover is solid fiberglass and die-formed with injection molded louvers.

Weather Cover

Designed to fit belt drive in-line centrifugal fans. The cover is epoxy coated steel and vented. Specify horizontal or vertical mounting.

Belt Guard

Covers motor sheave and belts outside the fan housing. Epoxy coated, steel construction.

CAUTION: The drive assembly or the periphery of the blades of a fan less than seven (7) feet above the floor or working level must be guarded to be in accordance with OSHA regulations.

Mounting Feet/Ceiling Suspension

Bolted to the inlet and discharge flanges, mounting feet allow for positioning of the duct fan on a floor, ceiling, wall or platform. Can be used with vibration isolators. Epoxy coated steel construction.

Vibration Isolators

Rubber-in-shear or spring type isolators are available. When using vibration isolators, mounting feet or a panel must be specified.

Hooded Roof Ventilator

When required, the Hartzell Fiberglass In-Line Centrifugal Fan can be supplied with a fiberglass weather hood. These power roof ventilators can be used for intake or exhaust.

Roof Mounted Upblast

Together with a fiberglass curb panel and fiberglass stack cap, the Hartzell Fiberglass In-Line Centrifugal Fan can be mounted as a roof exhaust. The stack cap has back draft dampers to provide a weather tight closure for vertical air discharge.

CFM Limitations for Damper Lid Operation

Series 40

Fiberglass In-Line Centrifugal Fan, Belt Drive

The Series 40 In-Line Centrifugal Fan offers non-overloading horsepower, high efficiency, low noise, and economy for corrosive atmospheres. It is unique in the fan and blower industry. It combines the design advantages of the axial flow fan with the performance characteristics of the centrifugal fan. The design saves space by incorporating a tubular housing, as opposed to a traditional scroll-type centrifugal housing, and allows for the unit to be installed directly in a duct system. The "tubular centrifugal" or in-line fan utilizes the Type FA backward curved, airfoil-bladed wheel in a vane-equipped housing and produces straight airflow with the same inlet and discharge dimensions.

Features

Performance: Type FA fiberglass airfoil wheel with inlet cone and built in aerodynamically designed straightening vanes produces from 800 CFM to 94,000 CFM at pressures from free delivery to 12" W.G. at high efficiencies with non-overloading horsepower, low noise, and low RPM. Power Ratings (BHP) includes Belt Drive Losses.

Temperature: Suitable for temperatures up to 200°F.

Note: Temperature correction factors must be applied when operating at other than ambient conditions (70°F). See Maximum Safe Speed Correction Factors chart on page 30.

Sizes: 12" – 60"

Classifications: Available in Class I and II in both 100% and 66% widths.

Arrangements: Available in arrangements 1 and 9.

Also available in a Power Roof Ventilator configuration.

For performance data, please visit

www.hartzellflow.com or contact your local sales representative.

Hartzell Air Movement certifies that the Series 40, Fiberglass In-Line Centrifugal Fans, shown herein are licensed to bear the AMCA seal for sound and air performance. Ratings are based on tests and procedures performed in accordance with AMCA Publication 211 and Publication 311 and comply with the requirements of the AMCA Certified Ratings Program. For performance and sound data, please visit www.hartzellflow.com or contact your local sales representative.

Dimensions and specifications are subject to change. Certified prints are available. Installation weight is approximate and is less motor, drives and optional equipment.

Series 41

Backward Curved Centrifugal Fan, Belt or Direct Drive

The Series 41 Fiberglass Backward Curved Centrifugal Fan offers non-overloading horsepower characteristics, high efficiency, low noise and economy for corrosive atmospheres. It is available in SWSI (single width single inlet) only.

Features

Sizes: 12"– 60"

Classifications: Available in classes I and II in 100% widths. Available in classes I, II, and III in 66% widths. Available in classes II, III and IV in 33% width.

Arrangements: Available in belt drive arrangements 1, 9 and 10; direct drive arrangement 4; and direct coupled arrangement 8. Please contact the factory for arrangement 8 dimensions.

Performance: Type FA fiberglass airfoil wheel with inlet cone and aerodynamically designed housing produces from 800 CFM to 100,000 CFM at pressures from free delivery to 30" W.G. at high efficiencies with non-overloading horsepower, low noise and low RPM.

Temperature Limitations: Suitable for temperatures up to 220°F.

Note: Temperature correction factors must be applied when operating at other than ambient conditions (70°F). See Maximum Safe Speed Correction Factors chart on page 30.

Rotation and Discharge Positions: Available in both clockwise and counter clockwise rotations in all standard discharge positions. Housing for 12" through 36" sizes are field rotatable.

Flanged Duct Connections: Outlet flange is standard, inlet flange is optional. Drilled flanges are optional. Inlet is slip-fit as standard.

For performance data, please visit www.hartzellflow.com or contact your local sales representative.

Type FA Wheel

Hartzell Air Movement certifies that the Series 41, Fiberglass Backward Curved Centrifugal Fan, Type FA, shown herein is licensed to bear the AMCA seal for sound and air performance. Ratings are based on tests and procedures performed in accordance with AMCA Publication 211 and Publication 311 and comply with the requirements of the AMCA Certified Ratings Program. For performance and sound data, please visit www.hartzellflow.com or contact your local sales representative.

Series 41 Fiberglass Backward Curved Centrifugal Fan with Scrubber

Series 41 Fiberglass Backward Curved Centrifugal Fan

Series 41 Sectional View

A. Access Door (Optional)

Raised, bolted door held in place with zinc plated bolts and gasketed for a tight seal. Allows for easy access to wheel compartment.

B. Shaft Guard (Optional)

Encloses the shaft/bearing assembly while permitting circulation of ambient air.

C. Drive Guard (Optional)

Encloses the drive assembly while permitting circulation of ambient air. Standard features include tach opening, belt tension openings and adjustable length to maximize air and sound performance.

D. Inlet Cone

Guides air smoothly into the wheel to maximize performance.

E. Type FA Wheel

Available in clockwise and counter clockwise rotation.

F. Drive Tensioning Motor Base

Provides easy method to adjust belt tension for belt driven fans.

Series 41P

Backward Curved Centrifugal Fan, Belt Drive, Packaged

The Series 41P Fiberglass Backward Curved Centrifugal Fan offers non-overloading horsepower characteristics, high efficiency, low noise, and economy for corrosive atmospheres in a compact packaged Class II design.

Features

- **Sizes** – 12" – 36"
- **Classification** – Class II construction
- **Arrangements** – Available in belt drive arrangement 10 with weather cover in both 100% and 66% widths. Sizes 22" - 36" are also available in 33% width.
- **Performance** – Type FA fiberglass airfoil wheel with inlet cone and aerodynamically designed housing produces from 800 CFM to 30,000 CFM at pressures from free delivery to 12" W.G. at high efficiencies with non-overloading horsepower, low noise, and low RPM.
- **Temperature Limitations** – Suitable for temperatures up to 220°F. Note: Temperature correction factors must be applied when operating at other than ambient conditions (70°F). See Maximum Safe Speed Correction Factors chart on page 30.
- **Rotation and Discharge Positions** – Available in clockwise and counter clockwise rotations in all standard discharge positions. Rotatable housing.
- **Flanged Duct Connections** – Outlet flange is standard, inlet flange is optional. Flange bolt holes are optional.

For performance data, please visit www.hartzellflow.com or contact your local sales representative.

**Shown with optional accessories.*

Type FA Wheel

Hartzell Air Movement certifies that the Series 41P, Fiberglass Backward Curved Centrifugal Fan, Packaged, shown herein is licensed to bear the AMCA seal for sound and air performance. Ratings are based on tests and procedures performed in accordance with AMCA Publication 211 and Publication 311 and comply with the requirements of the AMCA Certified Ratings Program. For performance and sound data, please visit www.hartzellflow.com or contact your local sales representative.

Series 41P Backward Curved Centrifugal Fan, Packaged

Arrangement 10 Dimensions

Series 41P, Type FA – Sizes 12" to 36" – Rotatable Housing
Standard Construction – Class II – Maximum Temperature: 250°F

Principal Dimensions (inches) – Series 41P – Sizes 12" – 36"

Series 41P Backward Curved Centrifugal Fans, Packaged

Type FA Wheel

Hartzell Air Movement certifies that the Series 42, Fiberglass Pressure Blower, shown herein is licensed to bear the AMCA seal for air performance. Ratings are based on tests and procedures performed in accordance with AMCA Standard 211 and comply with the requirements of the AMCA Certified Ratings Program. For performance data, please visit www.hartzellflow.com or contact your local sales representative.

Series 41U

Fiberglass Backward Curved Utility Set

The Series 41U Backward Curved Centrifugal Fan offers non-overloading horsepower characteristics, high efficiency, low noise and economy for most applications where corrosive elements exist in fume and vapor form. It is available in SWSI (single width single inlet) only.

Features

- **Sizes** – 12", 18", and 24"
- **Arrangement** – Available in belt drive arrangement 10, SWSI
- **Applications** – Developed to perform in compatible corrosive environments where it is advantageous to have fiberglass materials and have the motor out of the airstream.
- **Performance** – 700 CFM to 10,300 CFM at static pressures to 6" W.G.
- **Temperature Limitations** – Suitable for temperatures up to 220°F.
Note: Temperature correction factors must be applied when operating at other than ambient conditions (70°F). See Maximum Safe Speed Correction Factors chart on page 30.
- **Rotation and Discharge** – Available in clockwise or counterclockwise rotation in all eight discharge positions. Rotatable housing.
- **Fan Inlets and Outlets** – Straight inlet and outlet connections are provided for easy "slip-fit" connection to ducting.

For performance data, please visit www.hartzellflow.com or contact your local sales representative.

Series 42

Fiberglass Pressure Blower, Direct or Belt Drive, SWSI

Blowers available in SWSI only

The Series 42 Fiberglass Pressure Blower is particularly suited for lab hood installations. It is available in direct or belt drive in SWSI (single width single inlet) only. The direct drive pressure blower moves air at static pressures up to 12".

Features

- **Sizes** – 10" – 14" • **Performance** – 100 CFM to 2,000 CFM and S.P. to 12".
- **Arrangements** – Available in Arrangements 4 or 10.
- **Temperature** – Suitable for temperatures up to 220° F.

Note: Temperature correction factors must be applied when operating at other than ambient conditions (70°F). See Maximum Safe Speed Correction Factors chart on page 30.

- **Rotation** – Clockwise rotation is standard. Counterclockwise rotation is available.
- **Discharges** – Available discharges are shown on the next page. Rotatable in field.
- **Flanges** – Flanged outlets are standard. Inlet flanges are optional. Drilling of flanges is optional. Inlet is slip-fit as standard.

For performance data, please visit www.hartzellflow.com or contact your local sales representative.

Arrangement 4

Type F Wheel

Hartzell Air Movement certifies that the Series 42, Fiberglass Pressure Blower, shown herein is licensed to bear the AMCA seal for air performance. Ratings are based on tests and procedures performed in accordance with AMCA Standard 211 and comply with the requirements of the AMCA Certified Ratings Program. For performance data, please visit www.hartzellflow.com or contact your local sales representative.

Hartzell Air Movement certifies that the Series 43, Fiberglass Radial Blower, shown herein is licensed to bear the AMCA seal for air performance. Ratings are based on tests and procedures performed in accordance with AMCA Standard 211 and comply with the requirements of the AMCA Certified Ratings Program. For performance data, please visit www.hartzellflow.com or contact your local sales representative.

Series 43

Fiberglass Radial Blower, Belt Drive, SWSI

Blowers available in SWSI only

The Series 43 Fiberglass Radial Blower is a versatile blower designed to move air at static pressures up to 16". It is a belt drive unit available in SWSI (single width single inlet) only.

Features

- **Sizes** – 16" – 33"
- **Performance** – 220 to 18,000 CFM and S.P. to 18".
- **Arrangements** – Available in Arrangements 1, 9 or 10.
- **Temperature** – Suitable for temperatures up to 220° F

Note: Temperature correction factors must be applied when operating at other than ambient conditions (70°F). See Maximum Safe Speed Correction Factors chart on page 30.

- **Rotation** – Clockwise rotation is standard. Counterclockwise rotation is available.
- **Discharges** – Available discharges are shown on the next page. Rotatable in field.
- **Flanges** – Flanged outlets are standard. Inlet flanges are optional. Drilling of flanges is optional. Inlet is slip-fit as standard.

For performance data, please visit www.hartzellflow.com or contact your local sales representative.

Temperature/Altitude Correction

Performance tables are based on standard air conditions (sea level, 70°F, and 29.92 inches barometric pressure) giving an air density of .075 lbs. per cubic foot. The specific gravity of air equals 1.00 at these conditions. For an application where the fan operates at other than standard conditions (temperature, altitude, or both), correction factors must be applied to the selection of the fan. In addition, the standard construction of the fan must be modified.

Table 1 shows temperature and altitude correction factors. When a fan operates at other than standard conditions, correction factors are required to correct static pressure and horsepower.

Table 2 shows the maximum safe operating speeds for each size propeller. At high temperatures, these maximum safe operating speeds should be derated.

Table 3 shows maximum safe speed correction factors by temperature and material construction.

Table 1: Combined Altitude/Temperature Correction Factors

ALT. TEMP. °F FT.	0	1000	2000	3000	4000	5000	6000	7000	8000	9000	10000	11000	12000

* To correct maximum safe operating speeds (Table 2) for high temperatures, multiply those speeds by correction factors from Table 3.

Use of Correction Factors and Tables

EXAMPLE: Assume the required performance to be 16,500 CFM, .75" SP, 175°F, and 3000 ft. altitude.

- Table 1 gives us an altitude/temperature correction factor of 1.34.
- .75" S.P. x 1.34 = 1.00 S.P. for 70°F at sea level.
- A 36" Series 29 Direct Drive Duct Axial® Fan selected from the performance tables (see www.hartzellflow.com) for the new conditions shows 16,511 CFM, 1.00 S.P. at 1160 RPM with 4.36 BHP.
- Correct the horsepower and pressure in Step 3 to non-standard performance by dividing by the correction factor:
1.00" SP ÷ 1.34 = .75" S.P.
4.36 BHP ÷ 1.34 = 3.25 BHP
- Final performance of the direct drive Duct Axial® fan at the assumed conditions: 16,500 CFM, .75" SP, 1160 RPM, 3.25 BHP, 175°F, and 3000 ft. altitude.
